Project Design Phase-I
Problem – Solution Fit Template

Date	28 October 2026
Team ID	EN25CS3010040
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit means identifying a real problem experienced by a target customer and ensuring that the proposed solution addresses it. For this project, Olympic performance information is organized into Tableau dashboards so users can compare sports, countries, years, host nations, regions, and performance-efficiency measures in one place.

Purpose:

- Solve the difficulty of comparing Olympic performance across multiple datasets and categories.
- Make key trends and rankings quicker to understand through visualizations and KPI cards.
- Support clearer communication of country, sport, host, and regional findings.
- Understand the current data-analysis challenges and improve the experience for the target users.

Template:

Problem-Solution fit canvas 2.0

Purpose / Vision: Make Olympic sports performance easier to explore and compare.

1. CUSTOMER SEGMENT(S) — CS

Who benefits from the dashboard?
- Sports enthusiasts and Olympic fans
- Students and academic researchers
- Coaches, sports analysts and national sports bodies
- People comparing country and regional performance

6. CUSTOMER CONSTRAINTS — CC

What limits analysis today?
- Olympic data is spread across multiple tables
- Manual comparisons take time
- Aggregations and filters can change totals
- Medal counts alone do not explain efficiency

5. AVAILABLE SOLUTIONS — AS

What do users currently use?
- Official Olympic statistics and medal tables
- Articles and historical reports
- Spreadsheets and manual calculations
- Static charts with limited cross-comparison

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

What needs to be understood?
- Compare average medals by sport category
- Identify top countries by all-time medals
- Track medals awarded across years
- Compare hosts, regions, efficiency and investment

9. PROBLEM ROOT CAUSE — RC

Why is this problem present?
- Data is stored in separate datasets
- Static rankings show only one perspective
- Inconsistent aggregation/filter choices affect results
- Several performance dimensions are rarely combined

7. BEHAVIOUR — BE

How do users currently get answers?
- Search online for Olympic information
- Compare country rankings manually
- Sort and calculate values in spreadsheets
- Read articles and share findings

3. TRIGGERS & 4. EMOTIONS — TR / EM

Triggers
- Assignment or presentation needs
- Curiosity about top countries, sports or hosts

Before: overwhelmed by separate data and manual work

After: clearer patterns and more confidence

10. YOUR SOLUTION — SL

Interactive Tableau dashboards:
- Dashboard 1: Global Sports Performance and Analytics
- Average medals by sport, country rankings, yearly trend
- KPIs: 60 categories, 910 participation count, 18 nations
- Dashboard 2: Olympic Performance and Regional Efficiency
- Investment bubble, regional pie, host medals, donut chart
- Regional efficiency KPI displayed as 31.8

8. CHANNELS OF BEHAVIOUR — CH

ONLINE
- Tableau charts and online Olympic statistics
- Digital reports, dashboards and presentations

OFFLINE
- Classroom demonstrations and project reviews
- Discussions with classmates, faculty and teammates
