Project Design Phase-I

Solution Architecture

Date	28 October 2026
Team ID	EN25CS3010040
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	4 Marks

Solution Architecture: The architecture describes how Olympic CSV datasets are connected, analysed, and presented through Tableau worksheets, KPI views, and two dashboards.

SOLUTION FLOW

1. Data Sources Four Olympic CSV datasets	**2. Connect & Prepare** Tableau data source and fields	**3. Analyse** Aggregations, comparisons and KPIs	**4. Visualize** 7 analysis sheets + 4 KPI sheets	**5. Present** 2 interactive dashboards

Component Description Table

Component Name	Description / Role in Architecture	Technology Used
Data Sources	Four Olympic CSV datasets containing athlete information, all-time country rankings, Games summaries, and medal results.	CSV files
Data Connection & Preparation	Connects the datasets in Tableau and prepares fields/measures such as country, sport category, year, total medals, region, investment score, and medal efficiency.	Tableau data source / data model
Analysis & Calculations	Aggregates and compares medals, calculates average medals per sport category and medal efficiency, and summarizes participation, sports categories, and nations.	Tableau calculations and aggregations
Visualizations	Seven analytical sheets: sport-category medal averages, country medal totals, yearly medal trend, investment vs. medal performance, regional efficiency pie chart, host-country comparison, and regional medal distribution donut chart.	Tableau worksheets
KPI Sheets	Four KPI views show global athlete participation (910), sports categories entered (60), nations represented (18), and regional performance efficiency (31.8 as shown in the current dashboard).	Tableau worksheets / KPI text marks
Dashboards	Dashboard 1 combines global sports performance metrics, sport-category averages, country rankings, yearly medal trends, and KPI cards. Dashboard 2 focuses on regional efficiency, participation, investment vs. medal performance, host-country comparisons, and regional distribution.	Tableau Desktop / Tableau Public
Output	Interactive visual summaries help users compare Olympic performance across countries, sports, years, hosts, and regions.	Tableau dashboards
