Project Development Phase
Performance Test

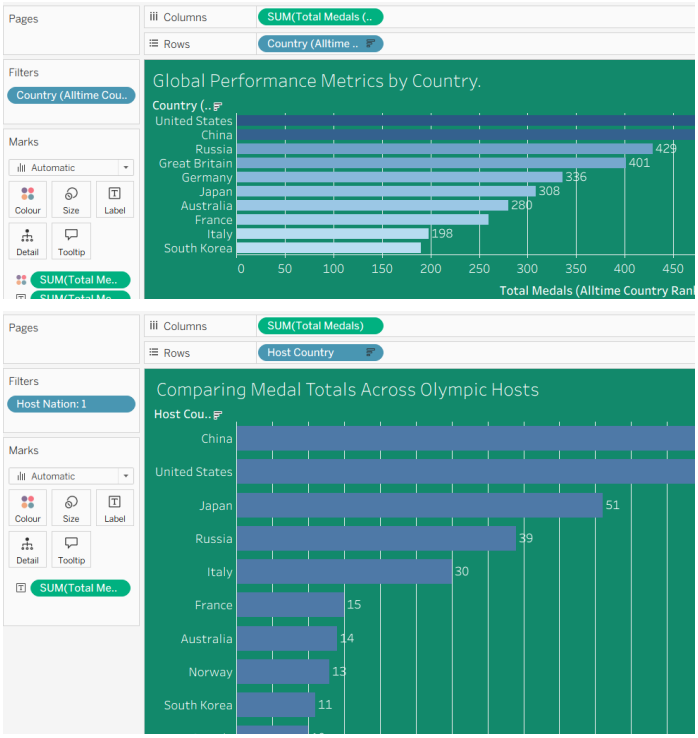

Date	28 October 2026
Team ID	EN25CS3010040
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	

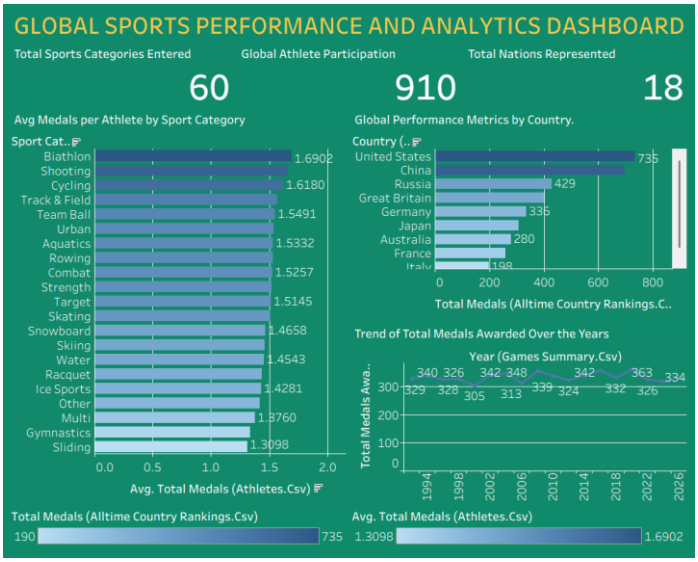

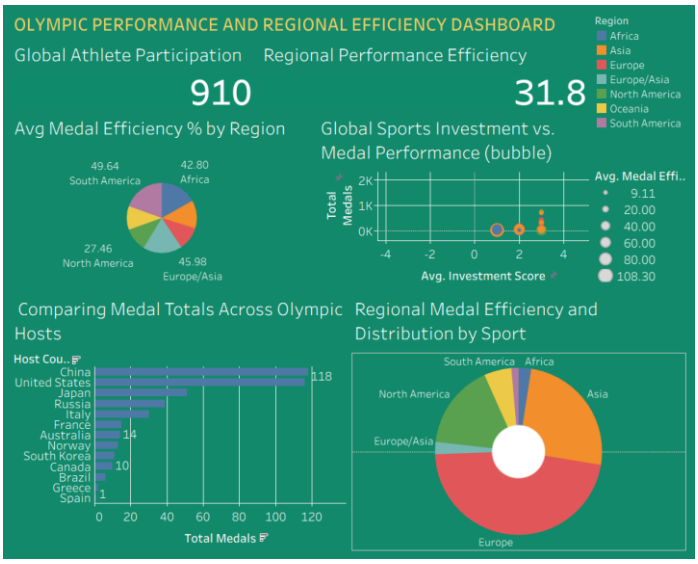

Project Performance Testing:

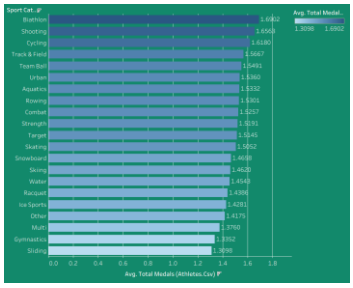

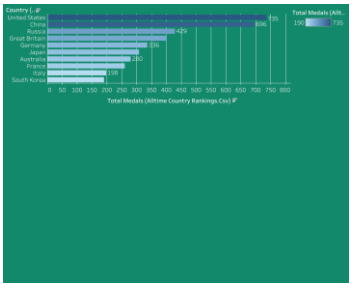

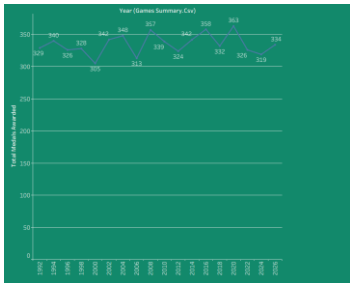

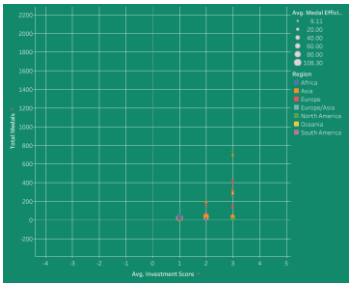

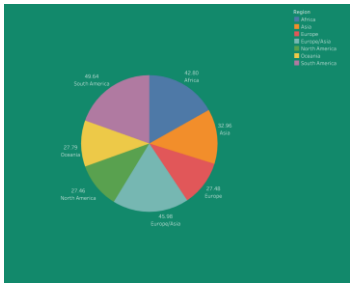

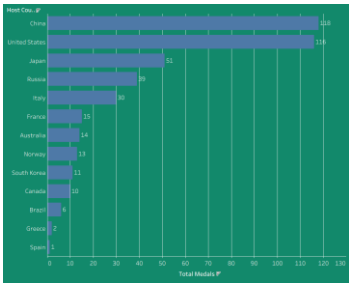

Project team shall fill the following information in model performance testing template.

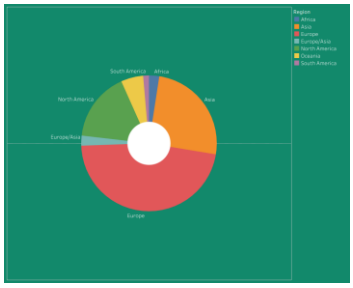

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	 Four institutional CSV datasets were successfully connected to Tableau and their data previews were verified. • **alltime_country_rankings.csv:** 60 rows and 13 fields • **athletes.csv:** 8,000 rows and 26 fields • **games_summary.csv:** 18 rows and 10 fields • **medal_results.csv:** 910 rows and 19 fields The datasets contain information about countries, athletes, Olympic games, host cities, sports, and medal results. Relationships between the datasets were configured in Tableau (for example, medal_results.csv is related to athletes.csv on Country) to support integrated analysis and interactive visualizations.
2.	Data Preprocessing	

medal_results.csv Year	medal_results.csv Host City	medal_results.csv Host Country	medal_results.csv Season	medal_results.csv Country	medal_results.csv Noc Code	medal_results.csv Region	medal_results.csv Gdp
1992	Barcelona	Spain	Summer	United States	USA	North America	High
1992	Barcelona	Spain	Summer	China	CHN	Asia	High
1992	Barcelona	Spain	Summer	Russia	RUS	Europe	Medi
1992	Barcelona	Spain	Summer	Great Britain	GBR	Europe	High
1992	Barcelona	Spain	Summer	Germany	GER	Europe	High
1992	Barcelona	Spain	Summer	Australia	AUS	Oceania	High

		The four institutional CSV datasets were connected directly to Tableau. The field names, data types, and data previews were reviewed to prepare the data for analysis. • **Data Source Connection:** Four CSV datasets were connected to Tableau. • **Field Review:** Relevant fields, including country, athlete, region, year, sport, and medal-related fields, were reviewed. • **Data Relationships:** Relationships between the datasets were configured to support combined analysis across worksheets and dashboards. • **Analysis Preparation:** Relevant fields were used to build visualizations and interactive dashboards.
3.	Utilization of Filters	 Filters were applied in the worksheets to focus the analysis on the relevant records. • **Country Filter:** Selects the countries shown in the Global Performance Metrics by Country chart. • **Host Nation Filter:** Host Nation is set to 1 in the Comparing Medal Totals Across Olympic Hosts chart, so only host-nation records are compared. **Output:** The filters are shown on the Filters shelf of each worksheet, and the charts update to the selected values.

4.	Calculation fields Used	One calculated field, `Unique Athletes`, was created for athlete-related analysis. • **Purpose:** To calculate the number of distinct athletes rather than counting repeated appearances as separate athletes. • **Application:** Supports analysis of unique athlete participation in the Olympic dataset. • **Validation:** The calculated field and its formula can be verified in Tableau's calculated field editor. **Formula:** `Unique Athletes = COUNTD([Athlete ID])`
5.	Dashboard design	No of Visualizations / Graphs - **11 worksheets (7 charts and 4 KPI indicators) in 2 dashboards** Dashboard 1:  Dashboard 2: 

		Two interactive dashboards were developed in Tableau for the Global Olympic Sports Performance Analysis project. • **Dashboard 1 — Global Sports Performance and Analytics:** Shows total sports categories entered (60), global athlete participation (910) and total nations represented (18), with average medals per athlete by sport category, global performance by country and the yearly medal trend. • **Dashboard 2 — Olympic Performance and Regional Efficiency:** Shows global athlete participation (910) and regional performance efficiency (31.8), with average medal efficiency by region, investment vs. medal performance, medal totals across Olympic hosts and the regional distribution. The dashboards organize related visualizations into clear sections to support comparisons and exploration.
6	Story Design	No of Visualizations / Graphs - **13 story points**  1. Avg medals per athlete  2. Total medals by country  3. Total medals awarded  4. Sports investment  5. Avg medal efficiency by region  6. Medal totals between hosts

7. Regional medals

8. Athlete participation

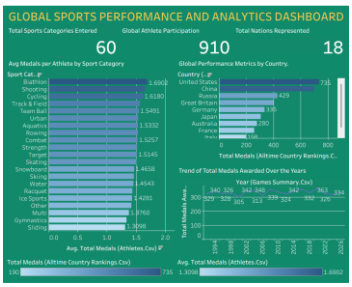

9. Sports categories

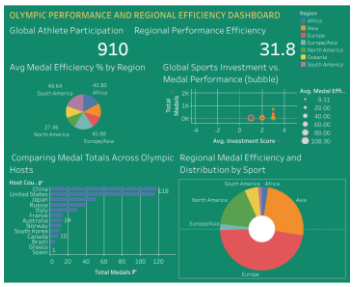

10. Nations represented

11. Regional efficiency

12. Global sports dashboard

13. Regional performance dashboard

A 13-point Tableau Story (Story 1) was created to present the findings in a structured sequence.

Outcome: The Story moves from sport and country medal performance, through yearly trends, investment, host and regional comparisons and key figures, to the two summary dashboards.
